The Geocomputation Research Hub presents:

PySAL: at the Intersection of Open Source & the Academy

Professor Sergio Rey, School of Geographical Sciences and Urban Planning at Arizona State University will discuss the Python Spatial Analysis Library (PySAL). His talk will provide an overview of PySAL and illustrate key components of the library drawing on examples from regional inequality dynamics and urban analysis.

Future plans for PySAL and related projects will also be outlined. Lessons learned in directing a distributed, open source project will be shared with a particular emphasis on the challenges and opportunities found at the intersection of open source and the academy.

The talk will be followed by drinks and a chance to speak informally with Prof. Rey, or just to mingle and chat with other researchers.

When:

Wednesday 22 February at 5:30pm

Where:

Room S-3.20, Strand Building, WC2R 2LS
